

Dranetz HDPO Magnetic Mount MM-HDPO

Designed to attach to the back of any Dranetz HDPO instrument, our magnetic mount gives you the ability to safely attach your instrument to any ferromagnetic surface. You no longer have to find tables, chairs, or boxes for a working surface. No more hanging the instrument from the cables plugged into the monitor. You can now conveniently attach the Dranetz HDPO to any ferromagnetic surface, such as switchgear, cabinets, panels, doors, etc. This allows the instrument to be safely placed at eye level, or any other convenient working location. The magnetic mount does not interfere with the standard instrument easel, so the instrument can still be easily used on a table top, floor or other horizontal surface.

Installing the magnetic mount is simple and easy; it replaces the standard hanger that comes on the back of the instrument. Just remove the two screws that attach the hanger, and then attach the magnetic mount in the same place, using the same screws - it's that simple. Store the hanger in a safe place, since it can be reattached later if needed.
